DETAILED ACTION

Inventorship

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Specification

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: claims recite the term "transducer" however, this is not disclosed in the specification. Applicant's assistance is requested to correct any other errors that may be noticed in the application.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2874

Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "said coupler.. can be deflected to change the light distribution among said output fibers without putting said coupling region under tension". This limitation makes the claim unclear and vague because there has to be some tension at the coupling region when the coupling region is deflected. This rejection also applies to claim 12.

Claims 2-11 and 13-22 are rejected as being dependent on rejected claims and therefore contain the same deficiencies as the claims they are dependent upon.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-3 and 6-22 are rejected under the judicially created doctrine of double patenting over claims 1-52 of U. S. Patent No. 6,463,187 B1 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: even though claims 1-3 and 6-22 are not word to word identical to claims 1-52 of prior U.S. Patent No. 6,463,187 B1, they are not patentably distinct. For example, the instant application recites the term "a transducer" that converts pressure fluctuations from an external source into pressure changes in the fluid column. Even though the patent does not use the exact term, a transducer, the patent's "membrane" disposed at the first portion of the fluid column is equivalent to the transducer recited in the instant application.

Allowable Subject Matter

6. Claims 4 and 5 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: there is no prior art that teaches or reasonably suggests a fiberoptic sensing apparatus with the specific elements and the specific combinations including a pressurizing device as set forth in claims 1 and 4.

Conclusion

7. The prior art documents submitted by applicant have been considered and made of record (note the attached copy of form PTO-1449).

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kawasaki et al (U.S. Patent 4,763,977) teach an optical coupler comprised of fused fibers to control the coupling ratio.
